Hard Skills — Technical Output & Delivery Evidence

Automatically captured across every sprint · no surveys · no self-assessment

1 Sprint Delivery Rate
% of sprints merged on-time across 8-week project.

2 Build Success Rate
Pass/fail ratio of code builds per sprint, per student.

3 Pull Request Discipline
Branches opened, reviewed, merged via correct platform workflow.

4 Gap Analysis Score
AI-assessed completion score (0–100) per sprint module vs. requirements.

5 Deployed Deliverables
Live API, frontend, DB schema, demo video — verified URLs.

6 Code Commit Consistency
Commit frequency and distribution across the sprint — not end-of-week dumps.

7 Version Control Adherence
Correct branch naming, PR process, no direct pushes to main.

8 API Contract Quality
Correctness and completeness of API contracts validated against FE integration.

9 Test Coverage Ratio
Unit + integration test coverage per submitted deliverable.

10 Design-to-Build Fidelity
Figma design version vs. deployed UI — visual diff score.

11 Requirement Traceability
User Story → Task → PR → Deliverable chain completeness.

12 Bug Resolution Rate
Bugs logged vs. bugs closed within the sprint window.

13 Blocker Escalation Speed
Time from blocker identified in NSM to PR or task unblocked.

14 Database Schema Quality
Migration files reviewed: normalization, indexing, naming conventions.

15 Sprint Board Discipline
Trello task movement accuracy — not batch-moved at deadline.

16 Stakeholder Demo Delivery
Demo video submitted and meeting attended per sprint milestone.

17 Customer Requirement Uptake
Technical tasks created from customer feedback within 1 sprint.

18 Cache/State Management
Correct use of caching and state patterns per role requirements.

19 Scope Adherence
Delivered features vs. committed sprint scope — no out-of-scope additions.

20 Mentor Review Resolution
Mentor code review comments addressed before sprint close.

Soft Skills — Behavioral Patterns & Professional Conduct

Automatically captured across every sprint · no surveys · no self-assessment

1 Attendance & Punctuality
Meeting join times and attendance rate across all scheduled sessions.

2 Deadline Adherence
Sprint submission timing vs. deadline — 8 independent data points.

3 Consistency Over Time
Performance pattern across all 8 sprints — not a single snapshot.

4 Mentorship Engagement
Frequency and quality of interactions with AI mentor per sprint.

5 Checklist Discipline
Task completion rate within each sprint's defined scope.

6 Feedback Responsiveness
Code and workflow improvements following mentor review feedback.

7 Cross-Role Collaboration
Documented handoffs and sync points with PM, designers, and developers.

8 Customer Communication
Response rate, tone, and resolution quality in customer chat threads.

9 Peer Communication
Initiative and constructiveness in peer/group chat interactions.

10 Blocker Transparency
Proactive escalation of blockers in NSM before they delay the sprint.

11 Initiative & Ownership
Self-assigned tasks, unblocking others, or scope extensions without prompting.

12 Meeting Contribution
Questions asked, action items taken, and participation level in group meetings.

13 Requirement Clarification
Questions raised about ambiguous specs before build sprint begins.

14 Explanation Quality
Depth and clarity of candidate self-explanations for technical decisions.

15 Conflict Handling
Tone and resolution pattern in cross-role disagreements captured in chat.

16 Adaptability to Feedback
Behavioral change visible in subsequent sprints after mentor feedback.

17 Stakeholder Empathy
Customer-centric framing in responses and feature prioritisation decisions.

18 Scope Negotiation
Evidence of negotiating scope changes with PM rather than silently dropping.

19 Knowledge Sharing
Explaining solutions, sharing resources, or unblocking peers in group chat.

20 Composure Under Pressure
Communication pattern and delivery consistency in final sprints vs. early ones.
